NOTES:
• A web-based Computer Selection Program, "Web-Select", is available to facilitate the selection process. Contact your representative to obtain access to this powerful and time-saving program.
• Some drawings are not shown in this catalog.
• All data herein is subject to change without notice.
• Drawings not for installation purposes.
• ETL Report Number J99024557-003 for single VH units. For VHA/VHB units, see Report Number 3014576-002 (non fire rated) and 3016281 (UL 1479 fire rated).
• Vertical Hi-Rise models VHA/VHB were subjected to the fire test program and certified in compliance with the requirements of UL 1479 by Intertek Testing Services Ltd.
FEATURES AND BENEFITS

HIGH PERFORMANCE

ENVIRO-TEC VH Series Vertical Hi-Rise fan coil units are designed to maximize flexibility of selection and installation, and for ease of service.

The units are also designed to exceed the stringent quality standards of the institutional market, while remaining cost competitive in the commercial and residential segments of the market.

ENVIRO-TEC Vertical Hi-Rise fan coil units set the new standards for innovation, quality, flexibility, and competitive pricing.

DESIGN FLEXIBILITY

The extensive variety of standard options available on VH Series fan coils are where you find the versatility to fit any HVAC system designer’s needs.

Options include: single wall stainless steel drain pans, foil faced or elastomeric closed cell foam insulation, double deflection aluminum discharge grilles, manual or motorized outside air dampers and electric heat with single point power connection and silent relays. All electric heat units are listed with ETL as an assembly and carry the cETL label.

All units comply with the latest edition of AHRI Standard 440 for testing and rating fan coil units, are certified, and display the AHRI symbol.

High efficiency motors, fan relays, disconnects and fusing mean easier coordination between mechanical and electrical trades.

Coil options allow for three or four row chilled water and one or two row hot water coils in the reheat position only. A total of five rows of coil are accommodated.

CONVENIENT INSTALLATION

All VH Series fan coil units are shipped completely assembled, reducing field installation time and labor. All units are thoroughly inspected and tested prior to shipment, eliminating potential problems at startup. Motor wiring is brought to a control compartment on the inside of the unit, reducing electrical hook-up time.

Factory furnished pressure tested valve packages assure proper fit, operation and performance.

Factory furnished pressure tested risers with swaged connections are available in a variety of materials, diameters and lengths.

VH Series fan coil units have several standard features that provide for installation flexibility that are unmatched in the industry. Featuring internal stainless steel braided hoses that link the piping packages to the riser shut-off valves, the unique design of the VH Series allows for easy field configuration of left hand, right hand, or back riser connections without the need for thermal cutting and joining of piping. Both the sides as well as the back panels are manufactured with riser slot knockouts. Supply air opening knockouts are included on all sides, and the top of the unit. If requested, the VHC/VHM/VHS units ship from the factory with knockouts removed for the selected arrangement of supply air and riser location.

Risers may ship in advance of the unit to facilitate installation and fire safing of floor penetrations in limited space. Delaying the delivery of units until walls are in place protects the fan coil units from construction debris during installation and pressure testing of the risers.

OPTIMUM BUILDING PERFORMANCE

The VH Series fan coil chassis is built from galvanized steel. This metal surpasses the ASTM 125 hour salt spray test for corrosion and rust. Decorator front panels, supply grilles, and exposed cabinet Model VHE are powder coated galvannealed 18 gauge steel. Standard insulation is 1/2 inch thick fiberglass, complying with UL 181 and NFPA 90A. Optional foil faced or elastomeric closed cell foam insulation may be specified.

All units, with or without electric heat, are cETL listed and labeled. All wiring is in compliance with NEC, assuring safety and quality for the owner.

VH Series fan coil units have removable fans and coils. The entire coil assembly can be easily removed from the unit and replaced or serviced on a workbench, reducing equipment down time. Coils are accessible for cleaning and removable for service or replacement. Filters are easily replaceable when the decorator front panel is removed. As an option, the drain pan can be equipped for removal for cleaning or replacement without disturbing the coil assembly.

Tandem Master and Tandem Slave Models VHA/VHB ship complete with risers enclosed in a wall plenum with one layer of 5/8” gypsum for sound attenuation. As an option, Tandem Master and Tandem Slave Units may be ordered with two layers of 5/8” gypsum and fire blocking material. The Tandem Master and Tandem Slave fire rated unit has been tested and certified for 1 hour rating per UL 1479.
CONSTRUCTION FEATURES

MODELS VHC, VHM, VHS, VHA/VHB, VHE
VH Series fan coils have many standard and optional features which are unique to the industry (see page 7 for a complete listing).

Factory mounted chilled and hot water and condensate insulated risers (not shown). Risers may also ship in advance of the unit.

Powder coated 18 gauge steel decorator front panel return grille (not shown)

Model VHE exposed cabinet features durable, powder coat paint finish

Top discharge knockout permits ducted connection

Double deflection discharge grille (optional)

ETL and AHRI 440 listed and labeled

Field configurable. Both side and back panels are manufactured with knockouts for riser piping and supply air openings. Facilitates field conversion of riser and supply air grille locations.

Unit or wall mounted analog, digital display, or programmable thermostats

Optional electric heat is ETL listed as an assembly for safety compliance

Stainless steel flexible braided hoses provide installation flexibility and accommodate riser expansion and contraction

Entire electric heat assembly can be removed for servicing

Hinged, quick open control door allows easy access to all electrical components

Single point power connection on all units with and without electric heat

Permanently lubricated, three tap, PSC fan motors designed for quiet and efficient operation

Field configurable. Both side and back panels are manufacture with knockouts for riser piping and supply air openings. Facilitates field conversion of riser and supply air grille locations.

Fan assembly can be easily removed for servicing on slide out rails

1/2" thick fiberglass insulation (standard), or foil faced or elastomeric closed cell foam insulation (optional)

Integral 1" throw-away filter (standard), or 1" pleated or synthetic media filter (optional)

Optional electric heat is ETL listed as an assembly for safety compliance

Permanently lubricated, three tap, PSC fan motors designed for quiet and efficient operation

Factory mounted piping packages

Hinged, quick open control door allows easy access to all electrical components

Double deflection discharge grille (optional)

Integral 1" throw-away filter (standard), or 1" pleated or synthetic media filter (optional)

Stainless steel flexible braided hoses provide installation flexibility and accommodate riser expansion and contraction

Double wall composite or stainless steel (optional) insulated drain pans are double sloped to drain connections

Hinged, quick open control door allows easy access to all electrical components

Optional removable drain pan

P-trap (removable) connection to condensate drain riser

Chilled water cooling coils up to 4 rows

Optional electric heat is ETL listed as an assembly for safety compliance

Hot water heating coils up to 2 rows are located in the reheat position

Optional removable drain pan

Maximum 5 total rows of coils combined

Tandem Master and Tandem Slave Models VHA/VHB ship complete with risers enclosed in a wall plenum with one layer of 5/8" gypsum for sound attenuation. As an option, Tandem Master and Tandem Slave units may be ordered with two layers of 5/8" gypsum and fire blocking material for a one hour fire rating per UL 1479.

Tandem Master and Tandem Slave Models VHA/VHB ship complete with risers enclosed in a wall plenum with one layer of 5/8" gypsum for sound attenuation. As an option, Tandem Master and Tandem Slave units may be ordered with two layers of 5/8" gypsum and fire blocking material for a one hour fire rating per UL 1479.
CONSTRUCTION FEATURES

FAN DECK

For ease of service, the fan/motor assembly is easily removed by unscrewing two locknuts located at the front of the assembly. Slide rails support the fan during removal and installation, and the electrical harness is equipped with a quick connect plug.

DRAIN PAN

The sloped insulated drain pan is available in stainless steel construction. Standard drain pans are double wall, composite, extend under the entire coil section, double sloped, and are removable. As an option, the VH Series drain pan can be equipped for easy removal from the front of the unit for inspection and cleaning. For optimum moisture resistance and cleanability, the fan coil unit may be lined with foil faced fiberglass insulation (shown above) or elastomeric closed cell foam insulation.

FILTERS

Filter options include 1" throwaway (standard), pleated MERV 8, or synthetic media. Filters are easily replaceable from the return air when the front panel is removed.

POWDER COAT PAINTED SURFACE

Exposed cabinet Model VHE, as well as the front return textured decorator panel, feature a powder coat finish that resists scuffing, scratching, fading, and fingerprints.

COILS AND PIPING

All fan coils are available in 2 or 4 pipe configurations. The heating coil is standard in the reheat position. Access for cleaning on both the entering and leaving air sides is available. Coils are removable from the front of the unit for service.

STAINLESS STEEL BRAIDED HOSES

Stainless steel braided hoses allow for flexibility and thermal expansion within the unit cabinet. The hose-to-coil and hose-to-riser connections are made via a threaded swivel adapter, simplifying coil removal.

RISERS

Risers, coils and piping packages are pressure tested and ship installed on the unit as a complete package. Risers may also ship in advance of the unit. This option greatly simplifies installation, while keeping the units free of construction debris during pressure testing of the risers.

CONTROL ENCLOSURE

The spacious hinged electrical compartment houses all electric heat and control components. Terminal strips are furnished for simple power and control wiring connections.
CONSTRUCTION FEATURES

REDUCING MOLD GROWTH IN HI-RISE RESIDENTIAL PROJECTS

VH Series fan coils feature several options to mitigate mold and mildew when applied in a properly designed and constructed building. For humid climates, ENVIRO-TEC offers innovations to ensure optimum humidity control at part load conditions.

- **Elastomeric closed cell foam insulation** is a great alternative to fiberglass insulation in extremely humid climates, as well as educational and hi-rise residential facilities. The material’s smooth and cleanable surface makes it naturally mold resistant, with no danger of fibrous material entering the airstream. Additional features include:
  - Easily cleaned surface resists dirt, moisture absorption, and microbial growth – even if torn or punctured.
  - Higher temperature limit than polyethylene CCF, able to withstand service temperature spikes without permanent failure.
  - More flexible than polyethylene CCF at 75°F, allowing expansion and contraction in hot and cold cycle applications.
  - Compression resistance; retains its thermal insulating capacity.
  - Outer moisture vapor barrier or liner not required.
  - Ratings: NFPA 90A and 90B, ASTM E84, ASTM G-21 (fungi resistance), UL 181 (mold growth/humidity and air erosion)

- **Motorized coil bypass damper** in conjunction with fan speed control increases dehumidification at part load and more closely matches cooling capacity to the room load during off peak operation.

- **Innovative temperature and humidity controller** improves part load relative humidity control.

- **Deep loading, synthetic media filtration** protects both the coil and the coil bypass air from airborne contaminants. Filter frame and media are non organic, and will not support mold growth.

- **Ship In Advance Risers** allow installation and pressure testing during building construction, prior to units arriving on job site.

- **Stainless Steel Drain Pans and Coil Casings** are available for use where added corrosion resistance or longevity are required.

- **Coils and piping packages are removable in minutes** through the standard front panel with only a screwdriver and pair of wrenches for periodic cleaning or service outside of the unit.

- **IAQ drain pan** is double sloped to prevent standing water. An optional drain pan is removable for effective cleaning.

Refer to the Guide Specifications in this catalog for additional information on many of these features.
STANDARD AND OPTIONAL FEATURES

**STANDARD FEATURES**

**Construction**
- AHRI 440 certified and labeled
- Galvanized steel construction
- 1/2" thick fiberglass insulation
- Integral filter rack with 1" throwaway filter
- Riser slot knockouts
- Supply air knockouts

**Decorator Front Panel**
- Stamped louver return air grille
- Durable powder coat paint
- Quarter-turn cam lock fasteners

**Supply Air**
- Single outlet
- Front, side or top outlets

**Coils**
- Cooling - 3 or 4 row chilled water
- Heating - 1 or 2 row hot water - reheat position
- 5 total rows of cooling and heating coils maximum
- High efficiency aluminum fin surface for optimizing heat transfer, pressure drop and carryover
- Easily removable for service
- Manual air vents

**Drain Pans**
- Double wall, composite, anti-microbial
- Double sloped to drain connection
- Removable, extended under the entire coil section
- 7/8" O.D. drain connection
- P-trap factory installed

**Fan Assemblies**
- Forward curved, DWDI centrifugal type blowers
- 115 volt, single phase, three tap PSC motors
- Quick disconnect motor connections
- Easily removable fan/motor deck for service

**Electrical**
- ETL listed for safety compliance
- Electrical enclosure with access door for field wiring terminations
- Terminal block for field connections

**Electric Heat**
- ETL listed as an assembly for safety compliance
- Integral electric heat assembly with removable elements for easy service
- Automatic reset primary and back-up secondary thermal limits
- Single point power connection

**OPTIONAL FEATURES**

**Construction**
- Master/Slave arrangements
- Foil faced fiberglass insulation
- Elastomeric closed cell foam insulation
- 1" pleated filter (MERV 8)
- Manual or motorized outside air damper
- Blower shield

**OPTIONAL FEATURES (continued)**

**Decorator Front Panel**
- Recessing frame
- Full faced aluminum grille

**Supply Air**
- Double deflection discharge grille(s)
- Double outlets
- Sight and sound baffles for double outlet units
- Opposed blade damper

**Coils**
- Automatic air vents
- Stainless steel coil casings

**Drain Pans**
- Stainless steel construction with external insulation
- Removable for cleaning

**Fan Assemblies**
- 208-230 & 277 volt, single phase, three tap PSC motors
- 115, 208-230 & 277V, single phase, three tap EC motors
- 115, 208-230 & 277V, single phase, variable speed EC motors

**Electrical**
- SCR fan speed controller
- Silent solid state fan relays
- Toggle disconnect switch
- Condensate overflow switch (drain pan)
- Main fusing
- Unit and remote mounted three speed fan switches

**Electric Heat**
- Silent relay/contactors
- Door interlocking disconnect switches
- Main fusing

**Piping Packages**
- Factory assembled and installed
- 1/2" 2-way and 3-way normally closed, two position electric motorized valves
- Stainless steel braided hoses (threaded swivel connections) for thermal expansion including isolation ball valves with memory stop
- Fixed and adjustable flow control devices
- P/T ports and Y-strainers
- Modulating control valves
- High pressure close-off actuators (50 PSIG max)

**Thermostats**
- Analog, digital display, or programmable
- Unit and wall mounted
- 2 and 4-pipe control sequences
- Automatic and manual changeover
- Integral three speed fan switches
- ADA mounting location on front panel or unit sides

**Risers**
- Type-M or L copper with swaged connections
- 3/4" to 3" diameters
- Up to 1-1/2" closed cell insulation
- Type-M copper condensate riser
- Riser extensions
- Riser cover
- Ship in advance risers

**Riser Extensions**
- Ship in advance risers
- Riser cover

**Piping Packages**
- Factory assembled and installed
- 1/2" 2-way and 3-way normally closed, two position electric motorized valves
- Stainless steel braided hoses (threaded swivel connections) for thermal expansion including isolation ball valves with memory stop
- Fixed and adjustable flow control devices
- P/T ports and Y-strainers
- Modulating control valves
- High pressure close-off actuators (50 PSIG max)
COILS, PHYSICAL DATA

COILS
ENVIRO-TEC offers hot water and chilled water coils for specific application with all VH Series fan coil units. Strict on-site inspection before, during, and after installation guarantees the highest quality and performance available.

STANDARD FEATURES
• Cooling - 3 or 4 row chilled water
• Heating - 1 or 2 row hot water
• 5 total rows of cooling and heating coils maximum
• High efficiency aluminum fin surface for optimizing heat transfer, pressure drop and carryover
• Manual air vents

OPTIONAL FEATURES
• Automatic air vents
• Stainless steel coil casings

ENVIRO-TEC offers Web-Select®, the industry’s first web-based fan coil rating and selection program for complete unit, coil and sound selection.

</tbody>
</table>

NOTE: Capacity and static pressures will be affected for applications above sea level. To apply correction factors, multiply factor to desired coil capacity or fan curve data.

Example: VH03 with 3 row coil, high speed fan operation at 3000 ft. above sea level and with 0.1 IN. W.C. ESP.

Solution: Using correction factors from Altitude Correction chart for 3000 ft. above sea level, data from AHRI Standard Ratings table and fan curves.
Total capacity = 12,500 BTUH (.983) = 12,288 BTUH
Sensible Capacity = 8,000 BTUH (.90) = 7,200 BTUH
SP = .1 (.90) = .09 IN. W.C.

ELECTRIC HEAT

STANDARD FEATURES
- ETL listed as an assembly for safety compliance
- Single point power connection
- Mounted in preheat position
- Automatic reset primary and back-up secondary thermal limits
- Internal wiring rated at 105°C
- Integral electric heat assembly with removable element for easy service
- Stainless steel terminals and hardware

OPTIONAL FEATURES
- Silent solid state relays
- Manual reset secondary thermal units
- Door interlocking disconnect switch
- Main fusing

USEFUL FORMULAS
\[ kW^* = \frac{CFM \times \Delta T \times 1.085^{**}}{3413} \]
\[ 10\text{ AMPs} = \frac{kW \times 1000}{\text{Volts}} \]

* 1kW = 3413 BTU/H
** Capacity at sea level

Altitude Considerations:
Reduce by 0.034 for each 1000 ft. of altitude above sea level.
Example: 5000 ft./1000 ft. = 5
5 x 0.034 = 0.17
1.085 - 0.17 = 0.915

NOTES:
1. Shaded areas of the electric heat selection chart indicate kW and voltage options not available.
2. Available voltages are single phase, 60 hertz.
3. Size heater for Leaving Air Temperature (LAT) less than 104°F.
4. Silent, solid state heater relay is available for heater currents less than 18 amps.
5. Ask your representative about continuously modulating electric heat using SSR and special control options.
RISER SELECTION AND DATA

RISER APPLICATION AND SIZING

Technical information on heat transfer, fluid flow and pipe sizing can be found in the ASHRAE Fundamentals Handbook and various other technical documents and publications. Some of the factors affecting riser application and sizing are noise, tube erosion and economics. The Friction Loss For Risers chart (next page) displays riser tube diameter sizes as a function of flow (GPM), friction loss and water velocity. For maximum riser velocity on pressure drop per 100 ft, refer to ASHRAE 2001 Fundamentals 35.3 Table 6 for Riser Sizing. Riser sizes can be of a single diameter on low rise buildings, or varying sizes on medium to high rise buildings. Generally, riser copper type, size, length and insulation thickness are determined by the location of the fan coil unit in the building. Chilled water and hot water risers are available in Type-M or Type-L copper, varying diameters from 3/4” to 3”, and with up to 1-1/2” thick closed cell foam insulation. Condensate risers are available in Type-M copper, varying diameters from 3/4” to 1 1/4”, and with 1/2” thick closed cell foam insulation.

RISER EXPANSION

Generally, in medium to high rise buildings, allowance must be made for pipe expansion. Model VH hi-rise fan coil units are furnished with hoses which act as expansion loops integral to the unit. The hose will allow for +/- 1½” of riser expansion and contraction. Additional expansion compensation must be made in the riser system in the field where movement is expected to exceed the factory allowances. The Allowable Riser Lengths Between System Expansion Loops chart (next page) displays the expansion characteristics of risers compared to water temperature difference. Technical information on pipe expansion, contraction and anchoring can be found in the ASHRAE HVAC Systems and Equipment Handbook and various other technical documents and publications.
RISER SELECTION AND DATA

GENERAL FAN NOTES

1. Fan curves on the following page depict actual performance of each motor tap without any additional fan balance adjustment. Actual capacities which fall below each curve can be obtained by adding an adjustment device.

2. ENVIRO-TEC fan coil units are equipped with permanent split-capacitor (PSC) motors with three separate taps (High, Medium and Low) which provides variable horsepower outputs. Most often, size selections are conservative and actual CFM requirements and/or external static pressure requirements are lower than those specified. In this case, the unit fan motor can be run at low or medium tap, substantially reducing the operating cost of the unit.

3. All fan curves are for 115/1/60 motors and include losses for cabinet, return grilles, electric heater, 3 or 4 row coil and clean 1" throwaway filter. For other coil configurations, adjust performance curves based on pressure losses for the coils using Web-Select®.

4. See page 17 for fan motor electrical data.
FAN PERFORMANCE CURVES, PSC

VH Fan Coil Units, Hi-Rise, Vertical

FORM ET115.26-EG5 (418)
THE ENERGY EFFICIENT SOLUTION

ENVIRO-TEC offers two high efficiency alternatives to the PSC motor. These are brushless DC (BLDC) motors with permanent magnet rotors, commonly referred to as ECMs (electronically commutated motors.) EC motors have been used for many years in residential HVAC units, and have now become the norm for high efficiency light commercial HVAC applications as well.

ENVIRO-TEC offers two different types of EC motor in VH Series fan coil units. While each of these EC motors significantly increases the operating efficiency of ENVIRO-TEC fan coils, they also provide different control and performance capabilities. For each motor, fan speed control is accomplished through a microprocessor based controller that electronically controls the speed of the motor. These motors provide peak efficiency ratings between 70 & 80% for most applications. The first, full featured, EC motor offers two choices of motor control:

1) Three speed (user adjustable) operation. Each of the three speeds provides constant airflow, and can be independently adjusted in the field.

2) Continuously variable speed operation, constant airflow. This is achieved via proportional control from a remote 2 – 10V DC signal.

The second EC motor offering provides Constant Torque operation. This motor is factory programmed for three separate fixed torque settings, corresponding to three speed, high efficiency operation. The three speeds are not user adjustable. However, each of these motors is supplied with a high capacity or standard capacity plug which can be manually changed in the field to assist in balancing the system.

ECM FEATURES AND BENEFITS

Ultra-High Motor & Controller Energy Efficiency

EC motors offer several advantages over PSC motors in fan Coils, including variable speed, constant CFM or constant Torque operation, and significantly higher efficiency. Due to the Permanent magnet rotor and electronic commutation, the EC Motor maintains approximately 75% efficiency at all speeds.

Designer / Owner Flexibility

The ECM incorporates ball bearings in lieu of sleeve bearings typically utilized with an induction motor.

Unlike a sleeve bearing motor, the ECM does not have a minimum RPM requirement for bearing lubrication. This allows it to operate over a much wider speed range, and provides for maintenance – free operation. A reduced spare parts inventory is another plus.

Custom Applications —

Programmable Fan Operation

Boundless control opportunities arise for the EC motor due to the controllability of the permanent magnet rotor combined with programmable electronic commutation. Various input signals can direct the motor to behave in an application specific mode. For instance, multiple discrete fan capacities can be achieved. In addition, the fan speed can be varied in response to the space temperature load. By default, the fan is also programmed for a soft start. This means that the motor starts at a low speed and slowly ramps up to the required speed.

Extended Motor Life

The high motor efficiency provides a significantly reduced operating temperature compared to an induction motor. The lower temperature increases the longevity of all electrical components and therefore the life of the motor. The ball bearings do not require lubrication and do not adversely impact the motor life. Expected ECM life will be considerably longer than a PSC motor, due to the reduced operating temperature and ball bearing components.

Application

Most variable speed electronic devices, including the ECM operate with a rectified and filtered AC power. As a result of the power conditioning, the input current draw is not sinusoidal; rather, the current is drawn in pulses at the peaks of the AC voltage. This pulsating current includes high frequency components called harmonics. Harmonic currents circulate on the delta side of a Delta-Wye distribution transformer. On the Wye side of the transformer, these harmonic currents are additive on the neutral conductor. A transformer used in this type of application must be sized to carry the output KVA that will include the KVA due to circulating currents. Careful design must be provided when connecting single-phase products to three-phase systems to avoid potential problems such as overheating of neutral wiring conductors, connectors, and transformers. In addition, design consideration must be provided to address the degradation of power quality by the creation of wave shape distortion. In summary, proper consideration must be given to the power distribution transformer selection and ground neutral conductor design to accommodate the 3-phase neutral AMPs shown in the adjacent table. Specific guidelines are available from the factory.
GENERAL FAN NOTES, VARIABLE EC MOTORS

1. Fan curves depict actual performance at the maximum speed of the EC motor. Depending upon external static pressure, flow rates are achievable anywhere within the curve boundary by adjusting the motor speed through the electronic interface control board.

2. Airflow rates will be constant for varying degrees of external static pressure caused by filter loading or other duct system variables once the electronic interface control board is set to desired flow rate.

3. Fan curves compensate for the pressure losses of the unit cabinet, coil rows, filter loading and other optional appurtenances.

4. EC motors operate using a rectified AC power source that is converted to a non-sinusoidal DC power wave form. Harmonic distortion may occur and circulate on the power distribution system. Circulating harmonic currents are potentially additive on the neutral conductors of 3-phase, 4-wire Wye distribution systems. Neutral conductors must be engineered to account for the additional current (amperes) encountered.

5. See page 17 for EC motor electrical data.

LEFT SIDE OUTSIDE AIR SHOWN, RIGHT SIDE SIMILAR BUT OPPOSITE.
GENERAL
Furnish and install ENVIRO-TEC VH Series Vertical Hi-Rise Direct Drive Fan Coil Units where indicated on the plans and in the specifications. Units shall be completely factory assembled, tested and shipped as one piece. All units shall be capable of meeting or exceeding the scheduled capacities for cooling, heating and air delivery. All unit dimensions for each model and size shall be considered maximums. Units shall be ETL listed in compliance with UL/ANSI Standard 1995, and be certified as complying with the latest edition of AHRI Standard 440.

CONSTRUCTION
All unit chassis shall be fabricated of heavy gauge galvanized steel panels able to meet 125 hour salt spray test per ASTM B-117. All exterior panels shall be insulated with 1/2” thick insulation with a maximum k value of .24 (BTU · in) / (hr · ft² · °F) and rated for a maximum air velocity of 5000 f.p.m. Insulation must meet all requirements of ASTM C1071 (including C665), UL 181 for erosion, and carry a 25/50 rating for flame spread/smoke developed per ASTM E-84, UL 723 and NFPA 90A.

Option: For units with multiple outlets, include an insulated sheet metal baffle inside the discharge plenum to break the sight lines between the two discharge outlets and to attenuate room noise that could be transmitted through the openings.

All unit panels shall have knockouts for supply air openings and riser slots to facilitate the field conversion of riser location and supply air grille location.

Option: Supply air opening knockouts shall be factory sealed and left in place during shipping and staging at the job site.

All units shall have decorator front panels fabricated of not less than 18 gauge galvannealed steel. The front panel shall include a stamped louver return air grille and be attached with quarter turn quick open fasteners to allow for easy removal and access for service.

All concealed units shall have a duct collar on the discharge.

All exposed units shall have exterior panels fabricated of not less than 18 gauge galvannealed steel. The front panel shall be attached with quarter turn quick open fasteners to allow for easy removal and access for service.

Option: Provide an architectural grade double deflection aluminum discharge grille.

Option: Provide foil faced insulation in lieu of standard. Foil insulation shall meet or exceed the requirements stated above, and in addition meet ASTM Standards C-665 and C-1136 for biological growth in insulation. Insulation shall be lined with aluminum foil, fiberglass scrim reinforcement, and 30 pound kraft paper laminated together with a flame resistant adhesive. All exposed edges shall be sealed to prevent any fibers from reaching the air stream.

Option: Provide Elastomeric Closed Cell Foam Insulation in lieu of standard. Insulation shall conform to UL 181 for erosion and NFPA 90A for fire, smoke and melting, and comply with a 25/50 Flame Spread and Smoke Developed Index per ASTM E-84 or UL 723. Additionally, insulation shall comply with Antimicrobial Performance Rating of 0, no observed growth, per ASTM G-21. Polyethylene insulation is not acceptable.

The slave unit will have a 5/8" layer of type-X gypsum board mechanically fastened to the unit wall adjacent to the risers.

Where a one hour rating of the partition between the units is required, a second layer of type-X gypsum board shall be provided joined together by a nominal six-inch wall that contains the supply, return and condensate risers. The cabinets of both units in the pair will be the same height and width regardless of capacity and will be the standard dimension of the unit with the greater capacity.

PAINTED FINISH
All painted cabinet exterior panels shall be finished with a heat cured anodic acrylic powder paint of the standard factory color.

SOUND
Units shall have published sound power level data tested in accordance with AHRI Standard 350-2000.

FAN ASSEMBLY
Unit fan shall be dynamically balanced, forward curved, DWDI centrifugal type constructed of 18 gauge galvan-ized steel for corrosion resistance. Motors shall be high efficiency, permanently lubricated sleeve bearing, permanent split-capacitor type with UL and CSA listed automatic reset thermal overload protection and three
separate horsepower taps. Single speed motors are not acceptable.

**Option:** Provide a blower shield to cover the entire fan assembly. The blower shield shall be tight fitting to prevent air bypass and prohibit accidental contact with the fan assembly. Units that allow accidental contact with the fan assembly with the decorator front panel removed are not acceptable.

The fan assembly shall be removed and serviced through the front and safety panels. The entire assembly shall be able to come out of the unit easily by removing two lock nuts and unplugging the motor.

**Option:** Provide an electronic fan speed controller (SCR) wired to high motor tap for aid in balancing the fan capacity. The speed controller shall have a turn down stop to prevent the possibility of harming the motor bearings, and incorporate electrical noise suppression to minimize noise on the incoming power lines.

**Option:** Devices used to energize and de-energize (switch) fan speeds must be totally silent. Magnetic, mercury, and/or quiet relays and/or contactors are not acceptable.

**COILS**

All cooling and heating coils shall optimize rows and fins per inch to meet the specified capacity. Coils shall have seamless copper tubes and shall be mechanically expanded to provide an efficient, permanent bond between the tube and fin. Fins shall have high efficiency aluminum surface optimized for heat transfer, air pressure drop and carryover.

All coils shall be hydrostatically tested at 450 PSIG air pressure under water, and rated for a maximum 300 PSIG working pressure at 200°F.

Heating coils shall be furnished in the reheat position as standard.

All water coils shall be provided with a manual air vent fitting to allow for coil venting.

**Option:** Provide automatic air vents in lieu of manual air vents.

**Option:** Provide a motorized two-position coil bypass damper. Damper shall be sized such that when it is opened, 30% of the fan airflow capacity will be drawn through the damper opening, bypassing the cooling coil.

**Option:** Coil casing shall be fabricated from stainless steel.

**DRAIN PANS**

Primary condensate drain pan shall be double wall composite and extend under the entire coil section. Drain pans shall be of one piece construction and be positively sloped for condensate removal.

Drain pan shall carry no more than a 25/50 Flame Spread and Smoke Developed Rating per ASTM E-84 and UL 723 and an Antimicrobial performance rating of 0, no observed growth, per ASTM G-21.

The P-Trap shall be easily removed and serviced through the front panel.

**Option:** Provide a removable primary drain pan to allow for inspection and cleaning. The drain pan shall be easily removed through the front panel without disturbing the coils. Drain pan access that requires removal of coils is not acceptable.

**Option:** Provide a primary drain pan constructed entirely of heavy gauge type stainless steel for superior corrosion resistance. Stainless steel drain pans shall be externally insulated and meet or exceed the requirements stated above.

**FILTERS**

All units shall be furnished with a minimum 1" nominal glass fiber throwaway filter. Filters shall be tight fitting to prevent air bypass. Filters shall be easily removable from the return air opening with the front panel removed, without the need for tools.

**Option:** Provide unit with 1" pleated filter (MERV 6).

**Option:** Provide unit with 1" self-gasketing filter consisting entirely of synthetic media and frames. Filter shall be tight fitting to prevent air bypass. Filter shall be easily removable from the return air opening with the front panel removed. Filter efficiency shall be 40% at 1.5 microns.

**ELECTRICAL**

Units shall be furnished with single point power connection. Provide an electrical junction box with terminal strip for motor and other electrical terminations. The factory mounted terminal wiring strip consists of a multiple position screw terminal block to facilitate wiring terminations for the electric control valves and thermostats.

**ELECTRIC HEAT**

Furnish an electric resistance heating assembly as an integral part of the fan coil unit, with the heating capacity, voltage and kilowatts scheduled. The heater assembly shall be rated for installation on the fan coil unit and be located so as not to expose the fan assembly to excessive leaving air temperatures that could affect motor performance.
GUIDE SPECIFICATIONS

The heater and unit assembly shall be listed for zero clearance and meet all NEC requirements, and be ETL listed with the unit as an assembly in compliance with UL/ANSI Standard 1995.

All heating elements shall be open coil type Ni-Chrome wire mounted in ceramic insulators and located in an insulated heavy gauge galvanized steel housing. All elements shall terminate in a machine staked stainless steel terminal secured with stainless steel hardware for corrosion resistance. The element support brackets shall be spaced no greater than 3-1/2" on center. All internal wiring shall be rated for 105°C minimum.

All heaters shall include overtemperature protection consisting of an automatic reset primary thermal limit and back-up secondary thermal limit. All heaters shall be single stage.

Option: Provide a manual reset secondary thermal limit.

All units with electric heat shall be provided with an incoming line power distribution block, designated to accept single point power wiring capable of carrying 125% of the calculated load current.

Option: Devices used to energize and de-energize (switch) electric heat must be totally silent. Magnetic, mercury, and/or quiet relays and/or contactors are not acceptable.

PIPING PACKAGES

Provide a standard factory assembled valve piping package to consist of a 2 or 3-way, on/off, motorized electric control valve and two ball isolation valves. Control valves shall be piped normally closed to the coil. Maximum entering water temperature on the control valve shall be 200°F, and maximum close-off pressure 25 PSIG. Maximum operating pressure shall be 300 PSIG.

Piping packages shall include stainless steel braided hoses to allow for thermal expansion within the unit cabinet. The hose shall be EPDM inner lined and Kevlar® reinforced, with stainless steel FNPT swivels and/or fittings. The hoses shall be rated for a maximum 450 PSIG working pressure at 250°F, and shall conform to NFPA 90A and carry no more than a 25/50 Flame Spread and Smoke Developed Rating, per ASTM E-84 and UL 723.

Option: Provide 3-wire floating point modulating control valve (fail-in-place) in lieu of standard 2-position control valve with factory assembled valve piping package.

Option: Provide high pressure close-off actuators for 2-way on/off control valves. Maximum close-off pressure is 50 PSIG (1/2").

Option: Provide either a fixed or adjustable flow control device for each piping package.

Option: Provide pressure-temperature ports for each piping package.

Piping packages shall be completely factory assembled, including interconnecting pipe, and mounted inside the unit in a serviceable location over the coil and primary drain pan.

RISERS

Furnish chilled and hot water supply and return risers mounted to the unit. Risers shall be Type-M seamless copper tube and include swaged connections at the top for connection to the unit above. Slip couplings are not acceptable.

Option: Provide Type-L copper risers that meet or exceed the requirements stated above.

Risers shall be insulated with 1/2" closed cell foam insulation covering the entire riser. Insulation shall conform to NFPA 90A and carry no more than a 25/50 Flame Spread and Smoke Developed Rating, per ASTM E-84 and UL 723.

Option: Provide up to 1-1/2" thick closed cell foam insulation that meets or exceeds the requirements stated above.

Condensate drain risers shall be Type-M seamless copper tube and meet the requirements stated above.

Option: Risers shall be factory fabricated, bundled, and tagged separate from the fan coil units, allowing for shipment and installation of risers prior to the fan coil units. The riser tag must show the corresponding FCU tag, floor number, room number, riser number, CW, HW, and condensate pipe diameters. Refer to submittal drawing on Ship in Advance risers.

OUTSIDE AIR DAMPER

Option: Provide a manual outside air damper with locking mechanism integral to the unit.

Option: Provide a motorized outside air damper integral to the unit and interlocked with the fan motor. The damper actuator shall be spring return closed.
